

ALEX CONERLY

Senior Data Analyst | Analytics Engineering & Automation

601-606-1852 | alexanderconerly@gmail.com | linkedin.com/in/alexconerly | alexconerly.github.io/portfolio

PROFESSIONAL SUMMARY

Senior Data Analyst and developer with 5+ years of experience building analytics, data pipelines, reporting, and automation with Python and advanced SQL. Trusted by ownership and senior leaders to translate complex operational data and business rules into reliable decision-support systems for inventory, profitability, compensation, customer strategy, and operations.

CORE EXPERTISE

Python	Advanced SQL	pandas
ETL & Data Pipelines	Data Modeling & Validation	Excel / PDF Automation
Analytics Engineering	Inventory & Profitability Analytics	Business Intelligence & Reporting
Generative AI Tools	Git & Production Deployment	Relational / NoSQL Databases

Additional project experience: Tableau, R, statistical analysis, machine learning, JavaScript, Flask, HTML/CSS, and AWS.

PROFESSIONAL EXPERIENCE

Corporate Data Analyst / Developer

March 2021-Present

Duff Capital Investors / Southern Tire Mart

Columbia, MS

- Design, build, automate, and maintain Python- and SQL-based analytics, data pipelines, and reporting systems used by ownership, executives, corporate teams, field leaders, and downstream analysts.
- Built complex inventory optimization and transfer systems that evaluate demand, availability, sales velocity, geography, and business constraints to help more than 200 locations coordinate stock movements and reduce excess inventory.
- Created reusable analytics frameworks that standardize complex business logic and deliver tailored decision tools across inventory, sales, profitability, customer strategy, compensation, and operations.
- Served as a primary analytics partner to Strategic Account Managers, building scalable Python systems for complex, customized reporting across major national and regional accounts.

SELECTED PUBLIC PROJECTS

Nashville Airbnb Price Prediction

Academic Team Capstone

Compared predictive models and helped deliver rental-price estimates through a database-backed Flask application. *Python, SQL, Flask, Plotly, machine learning*

MechaCar Statistical Analysis

Academic Project

Applied regression, summary statistics, and hypothesis testing to evaluate factors affecting vehicle-prototype performance. *R, regression, hypothesis testing*

Cryptocurrency Clustering

Academic Project

Prepared cryptocurrency data and used dimensionality reduction and clustering to identify groups with similar characteristics. *Python, PCA, clustering, unsupervised learning*
